

## BATCH #5

As the name suggests: "an Equation Solver"

# Table of Contents

- Team Introduction
- Project Introduction
- UML Diagram
- Block Diagram
- Project Front End
- Project Back End
- Project Interfacing
- Live Demonstration
- Further work
- References

# What's our Project

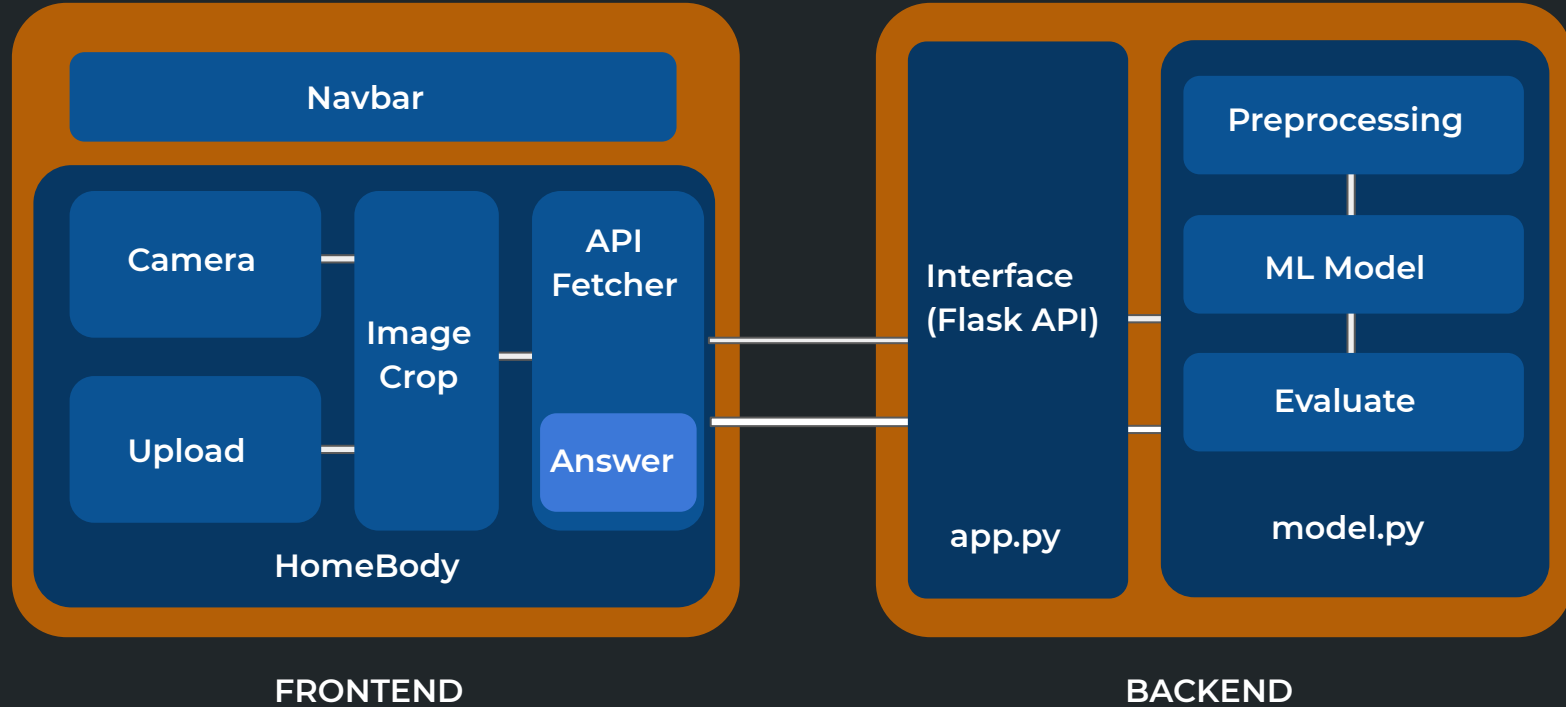

- EQ-sol is an application where the user scans handwritten mathematical equations, and the corresponding solutions are displayed by the application.
- Some of the features include:
  - Simple expressions
  - Linear equations (dev)
  - Quadratic equations (dev)

# UML Diagram (LucidChart)

# Project Block Diagram

# Front End

- The front end is developed using ReactJS and its modules
- The two main features are:
  - Upload or Drop images using react-dropzone
  - Take a picture via webcam using the react-webcam module
- In both cases, cropping - using react-image-crop is included to enhance user experience.

# Front End - Display

 Q-Sol

***Hola, Estudiantes***

*Let's start solving the equations.*

Capture using Webcam

Upload the picture

# Back End

- The back end is implemented using Python, Keras and OpenCV
- OpenCV performs character segmentation and binarization
- The Keras model is used to predict the segmented characters and returns the result as a string
- This string is solved and is sent back to the frontend for display

## Back End - Preprocessing

2 + 5

# Back End - ML Model features

- Type -> Sequential Model
- Two Convolution 2D layers -> for feature extraction
- Two Max Pooling Layers -> for dimension reduction
- One drop out layer -> to avoid overfitting

# Interfacing

- The interfacing is implemented using Flask.
- Also used modules like flask-cors for supporting Restful API.
- From the frontend side, Flask API is called using fetch() with POST method sending the cropped image.
- In the interface , the image is saved in server and passed to backend.

**LIVE DEMO**

## Further work

- Fixing a bug that occurs while reading the '=' symbol
- Adding the functionality of linear and quadratic equations
- Improving the accuracy of the model to hit at least 95%
- Fixing an issue that arises when the background is an off-white colour
